Habitat
lost**

Cosumnes River 2008

No Dams = Floods with winter rain events = inundates floodplain

River

Floodplain

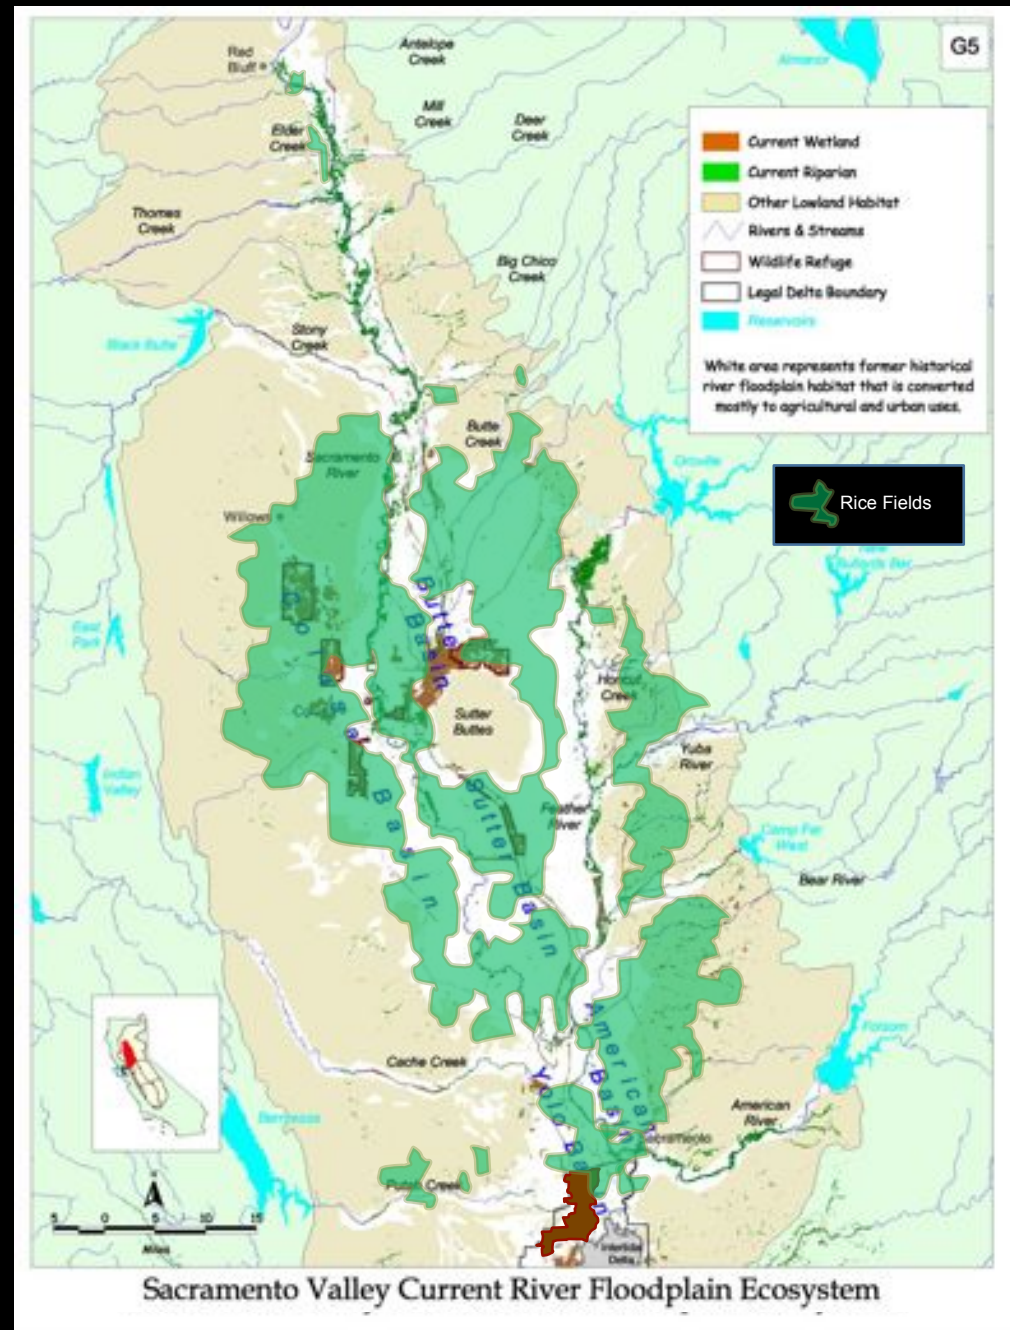

Historic:

Fall run Chinook evolved rearing on floodplains

TODAY:

- **95%** of floodplains lost
- drained and converted to rice.
- In California 550,000 acres of rice is farmed annually.
- Now, many of the rice fields are managed for migrating birds during winter months.

We are never going back

(Approx. 60%)

Slow it down!

Spread it out!

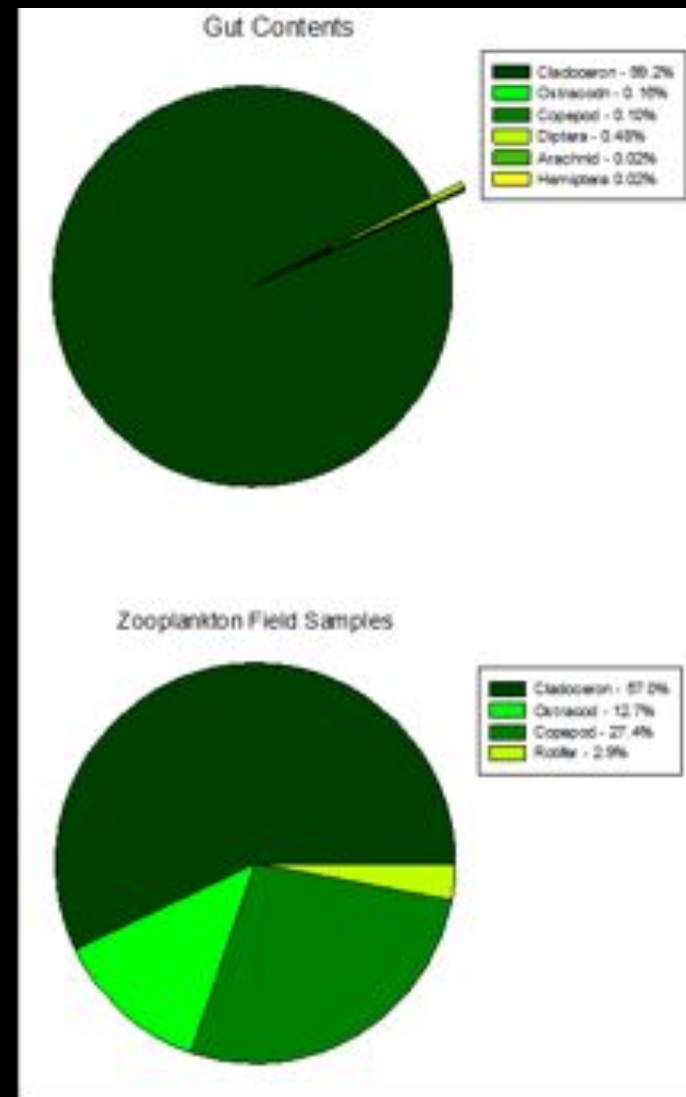

Grow them up!

Knaggs Gut Contents

- Contents from a single 79mm salmon
 - ~460 individual cladocerans

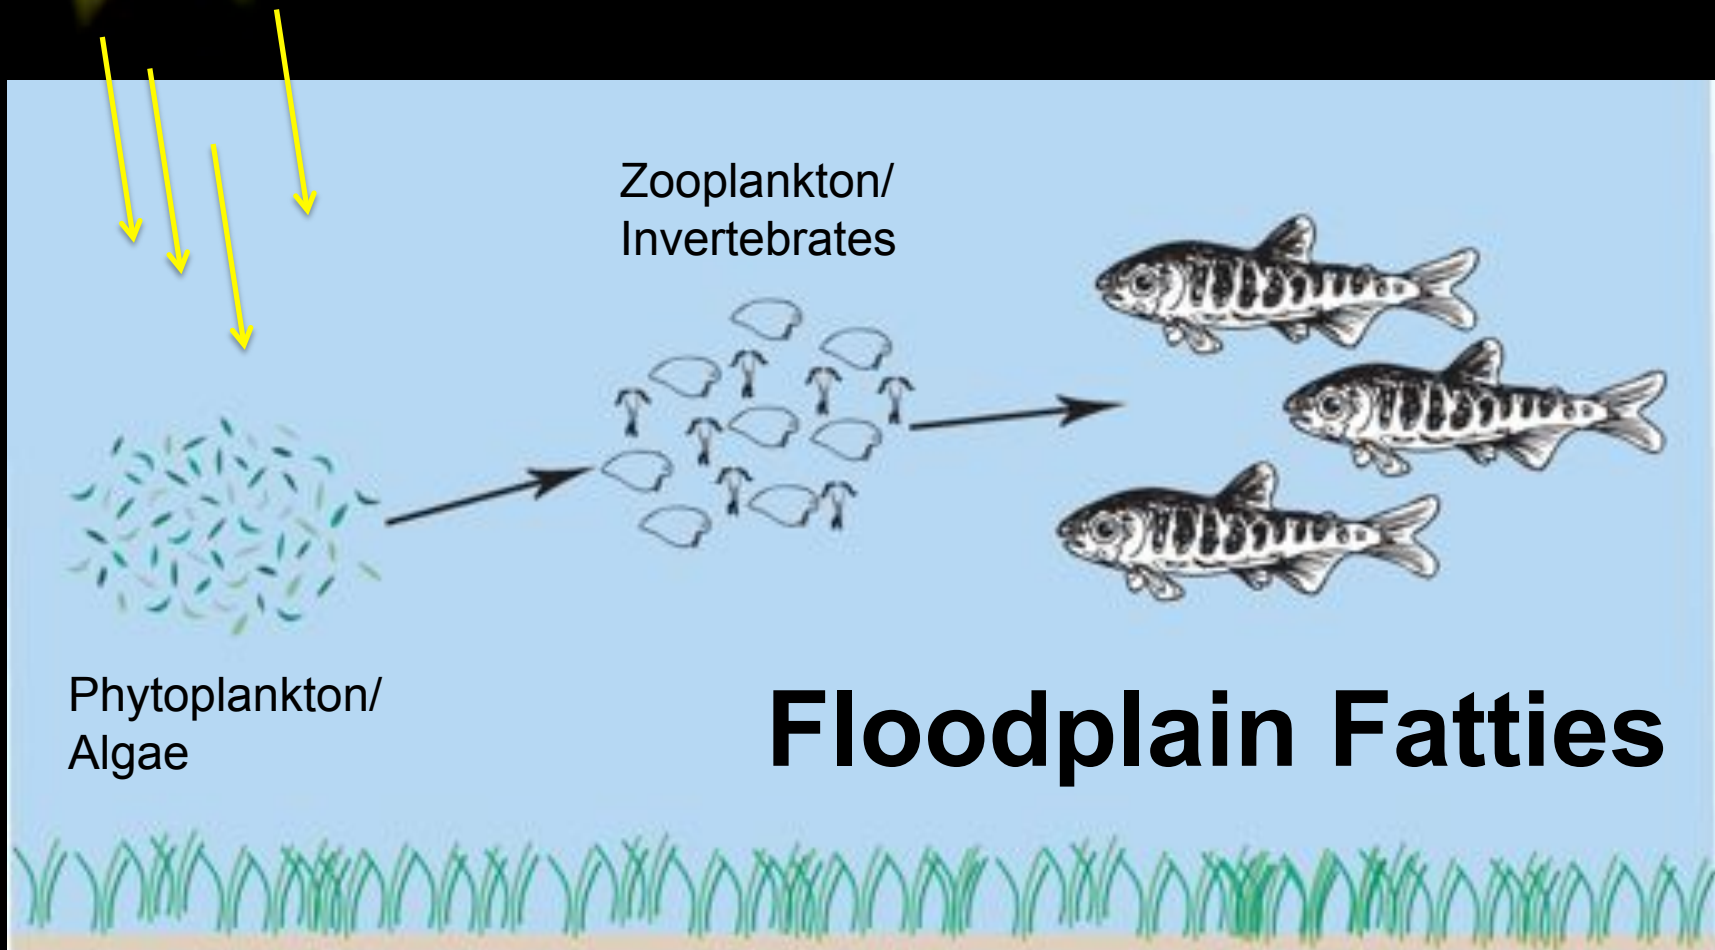

An aerial photograph showing a large area of agricultural land that has been flooded. The water is a murky, brownish-grey color, covering the fields and surrounding areas. In the foreground, there are some green trees and a dirt road. The background shows a vast expanse of water extending to the horizon under a clear blue sky.

Process-Based Solutions:

Only landscape-level riverine processes can create and maintain the diverse mosaic of habitat types needed for the full lifehistory expression on which resilient, self-sustaining populations of wild fish depend

Landscape Scale Connectivity

More Inundation
(flow related solutions)

Longer Inundation
(water retention related solutions)

The UC Davis Center for Watershed Science

Cal Marsh and Farm Ventures, LLC

Knaggs Ranch, LLC

The U.S. Bureau of Reclamation

NOAA – Southwest Fisheries

This work is collaborative and could not be achieved without the effort of many:

Ted Sommer, Louise Conrad, Gina Benigno, Steve Brumbaugh, Josh Martinez (DWR), Carson Jeffres, Peter Moyle, Nick Corline, Miranda Tilcock, Veronica Corbet, Eric Holmes (UCD), Josh Israel (US Bureau of Reclamation), Joe Kiernan and Sean Hayes (NMFS), Jason Roberts Krystal Acierto (DFW), John Brennan, David Katz and Huey Johnson (Cal Marsh and Farm)

Questions?

Carson Jeffres

Carson Jeffres

Process-Based Reconciliation

Integrating a working knowledge
of natural process, into
management of natural resources

Flooding instead of burning

Central Valley Waterfowl

Unassisted access to diverse
habitats in space and time →

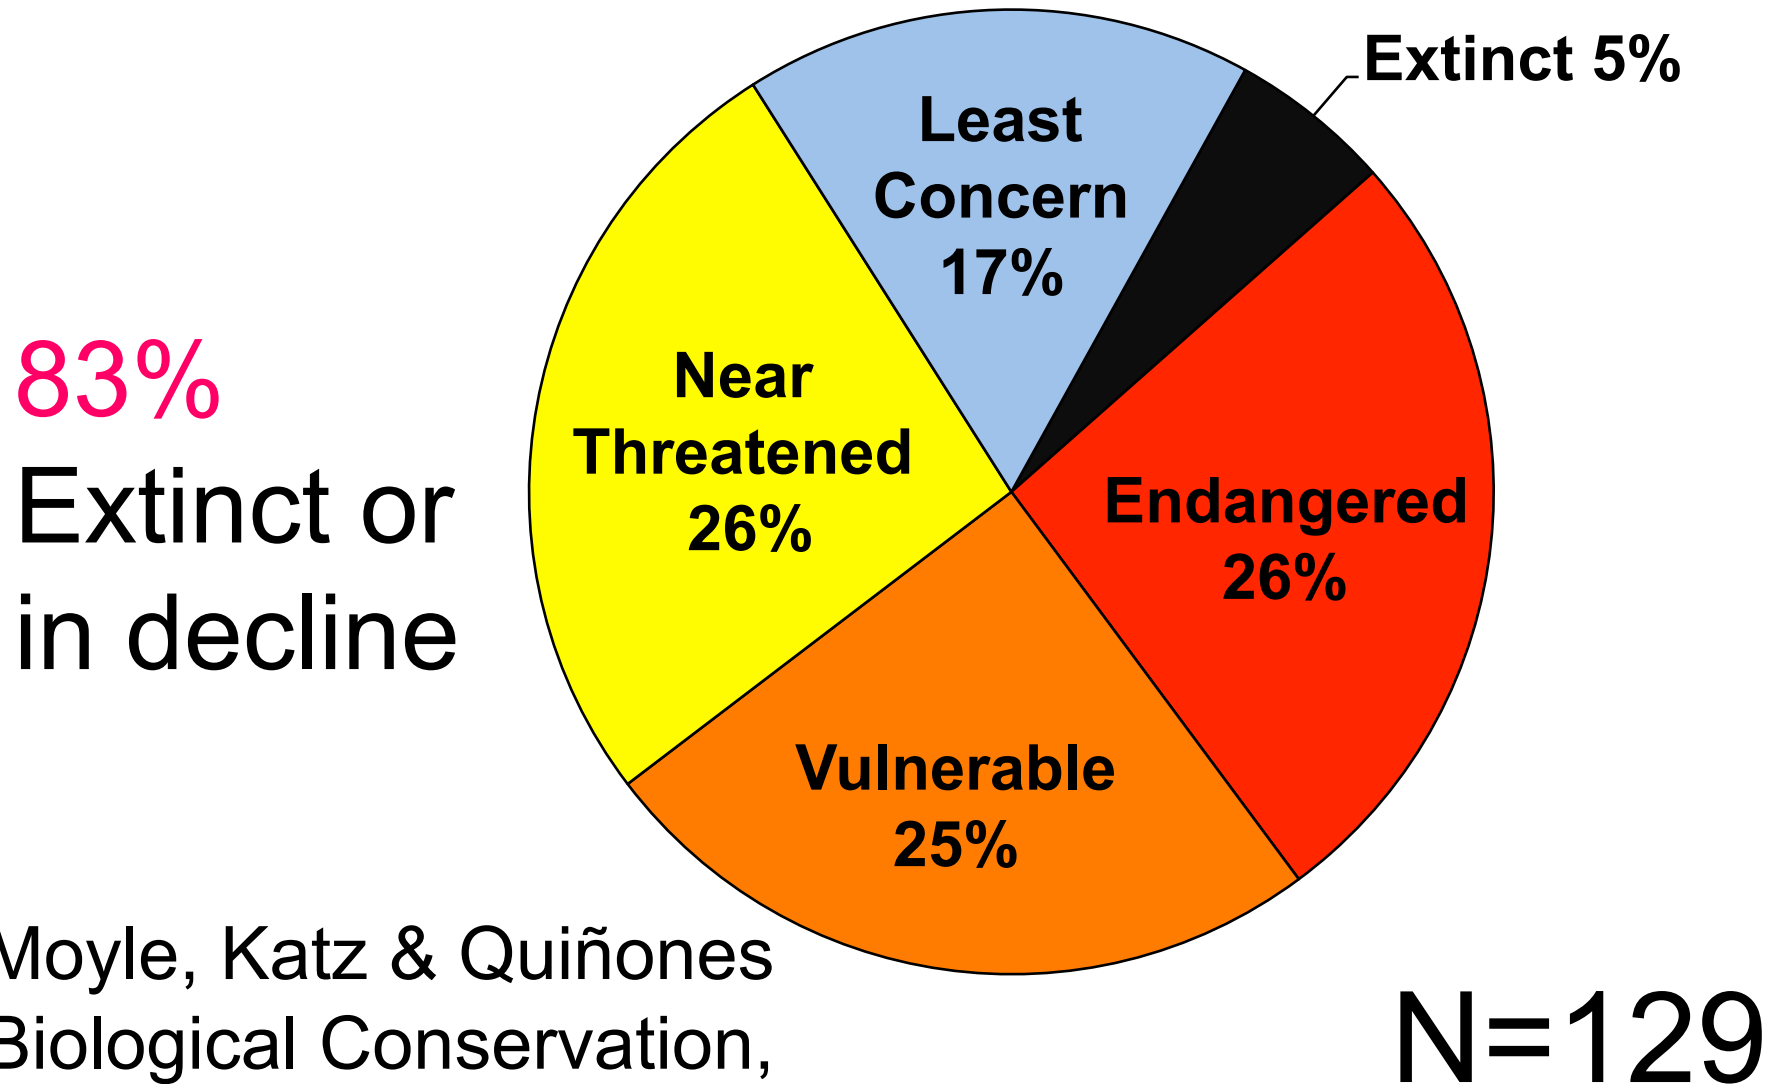

expression of diverse
life history strategies →

limited gene flow
between breeding groups →

adaptation to local environmental conditions
via natural selection →

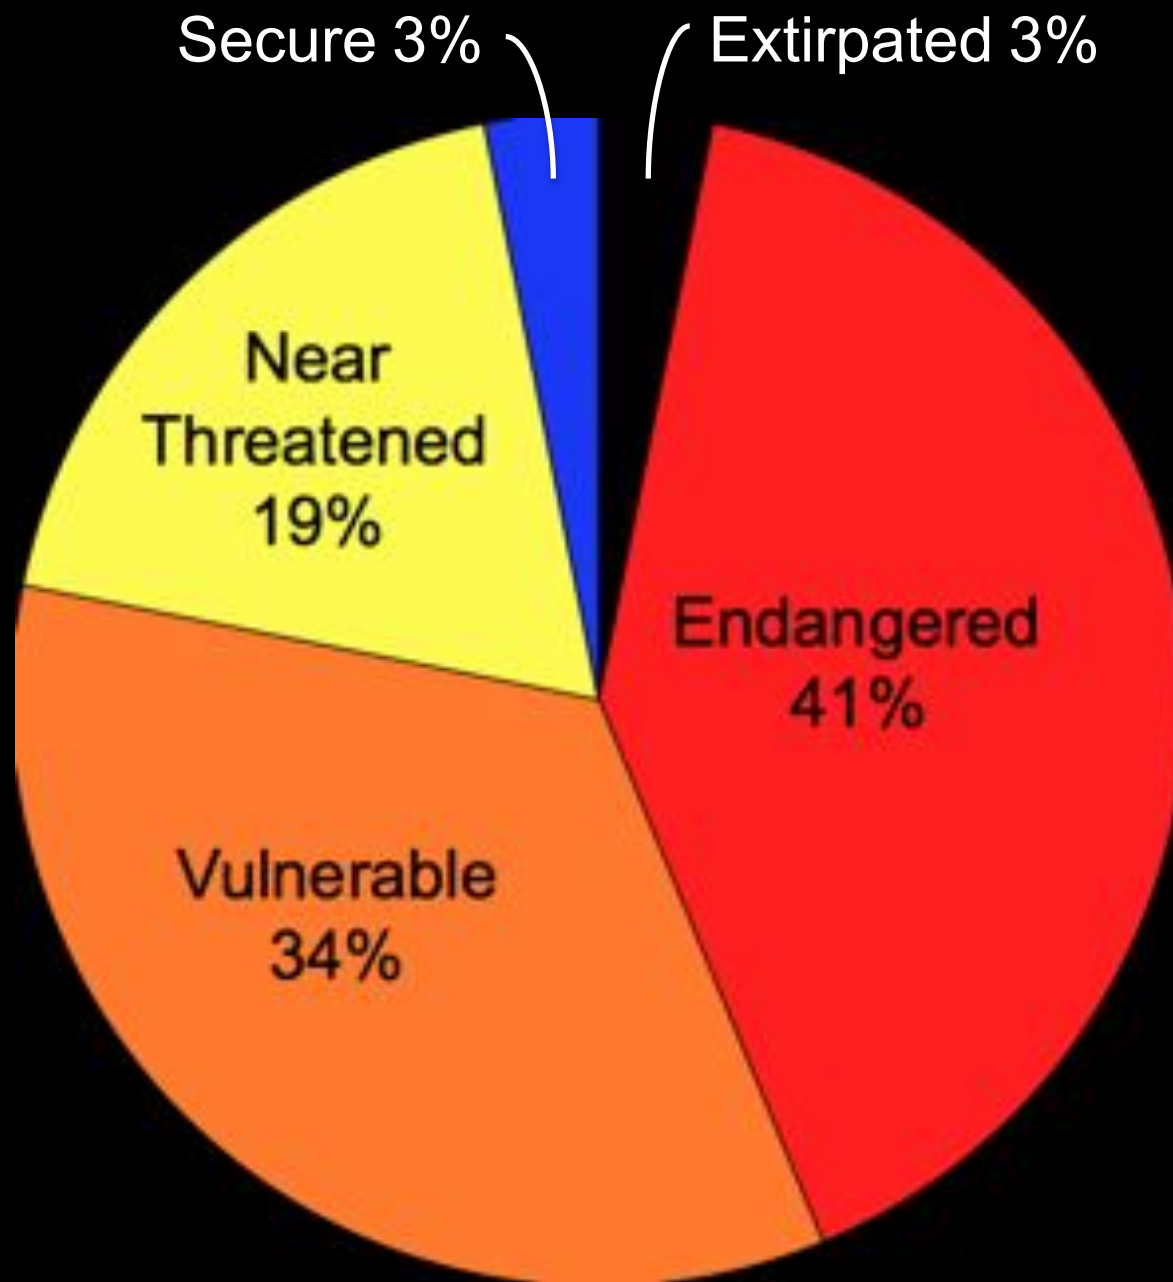

evolution and maintenance
of discreet populations (runs)

CA NATIVE FISHES 2011

Moyle, Katz & Quiñones
Biological Conservation,
Vol 144, issue 10, Oct. 2011

N=129

Vast Majority (94%) of California native salmonids in sharp decline

Katz et al. 2013
Env. Biology of Fishes 10

Native species must
to be able to
recognize their
environment

We are never going back!

**But we must look back in order to
move forward.**

**We must have a working
understanding of natural systems in
order to build better more effective
human systems**
